

Discovery Channel Discovers Garrett

GARLAND, TX, March 12, 2008

Garrett Metal Detectors, a leading manufacturer of hobby and security electronics, will be featured in an upcoming episode of the popular series *How It's Made* on the Discovery Channel and the Science Channel USA in early fall 2008.

"We were delighted to have the Discovery Channel contact us to ask if they could film a segment for *How It's Made*," said Garrett Vice President Vaughan Garrett. "We quickly accepted the opportunity and on March 5, a film crew from the Discovery Channel documented the manufacturing process of the SuperWand and ACE 250 metal detectors at the Garrett factory."

The finished segment, simply titled "Metal Detectors," will be five minutes in length and will run for years. *How It's Made*, seen worldwide in 180 countries and translated into 23 languages, reaches an international audience of approximately 100 million viewers per week. "This is a tremendous opportunity for our company," Garrett added.

Garrett Metal Detectors is a worldwide leader in the research, development, manufacture, and training of hobby and security-related metal detection products. Since 1964, Garrett's Hobby Division has created best-selling metal detectors ideal for all treasure hunting environments. Garrett's Security Division manufactures walk-through and hand-held metal detectors for security, law enforcement and industrial applications worldwide—including the Olympic Games and U.S. and international airports.

The Discovery Channel films the ACE 250 assembly process.

ACE 250
High Performance Metal Detector

SuperWand
Hand-Held Metal Detector
